

My Research Direction and Interests

A One-Minute Introduction

Rose (Jibao Yuan)

National University of Defense Technology

April 2026

Who I Am

- I am a first-year Master's student in Electronic Information at NUDT.
- I received my B.Eng. in Artificial Intelligence from South China Normal University.
- My academic background is in reinforcement learning, and now I am moving toward embodied intelligence.

My Research Direction

- My earlier work focused on Multi-Agent Reinforcement Learning, especially cooperative learning methods.
- Now I am shifting my main focus to Embodied AI, because I want to study systems that can work in the physical world.
- I am especially interested in closing the sim-to-real gap for robot learning.

Topics I want to explore

- Robotic manipulation, grasping, and dexterous control
- Vision-Language-Action models for general-purpose robots
- Scalable data and training pipelines for embodied intelligence

Goal: to build intelligent agents that can perceive, decide, and act more effectively in real environments.
